COURSE: HESC 3641 Advanced Exercise Physiology

Course Title: Advanced Exercise Physiology

Course Number: HESC 3641  Session 1  2010

Lecture Theatre: CLB4, Laboratory: 202 and 204 WW building

Time/Day: Lectures: 9 - 10 am, Monday (CLB4); 2 - 3 pm, Tuesday (CLB4); Labs: 1 - 3 pm; 3 - 5 pm, Monday (204); 1 - 3 pm; 3 – 5 pm, Wednesday (202).

Coordinator: Dr. Yati N. Boutcher

Office: 252, F20 Goodsell building  Phone: 9385 2419  Email: y.boutcher@unsw.edu.au

Office hours: Monday 2 - 3 pm & Tuesday: 3 - 4 pm

Lecturers:  - Dr. Yati N. Boutcher
           - A/Prof. Steve Boutcher

Rationale
This course gives an overview of advanced exercise physiology. It is a more advanced version of HESC 2501 Exercise Physiology. Concepts in advanced exercise physiology such as bodily response to exercise as well as exercise adaptations will be covered. Students will have hands on experience of carrying out a range of laboratory-based experiments.

Structure
Thirty-four hours of formal contact time. This contact time comprises two 60 minute lectures, and a 120-minute laboratory class.

Aims
The major aims are to provide the student with:
1. An overview of advanced exercise physiology
2. An understanding of how the human body works during exercise
3. An understanding of how the human body adapts to regular exercise
4. A variety of hands-on experience in carrying out laboratory-based experiments
Learning outcomes
The student is expected to:
• understand advanced integrated exercise physiology
• understand the major physiological adaptations to exercise
• acquire conceptual understanding from laboratory experiences

Course Text

Recommended Texts
• Tipton CM (editor) (2006). ACSMS’s Advanced Exercise Physiology. Lippincot Williams & Wilkins.

Assessment
1. Written exam (40% of grade). The written exam will consist of multiple choice and short answer questions.
2. Lab report (25% of grade). Students are expected to write a lab report, which is mainly answering questions and creating graphs and tables from the data obtained. Do not submit the lab report through email.
3. Research question (25% of grade). Students are expected to write up to 10 pages (doubled spaced) not including tables and graphs, on a research question in Exercise Physiology or a related area. Students will choose the research question from a list provided. The submission date is 11 May 2010 (week 10) by 4.00 pm. Do not submit similar topics that have been previously submitted in another course.
4. Research participation (10% - 15 hours).

Punctuality and unit attendance
• Class and laboratory role will be taken in every lecture and laboratory. Students are expected to attend the class on time.
• The attendance is compulsory for both lecture and the labs. Minimum of 80% of lecture attendance and 100% of lab attendance are required to pass the course. Failure to attend one of the labs will result in failure of the course. Students who cannot meet the attendance criteria above will not be allowed to attend the exam. Students who cannot attend lecture or labs for medical reasons need to produce a medical certificate.

Penalties for late submission of assignment
In cases where an extension has NOT been granted, the following penalties will apply:
• The lab report has to be handed in before the next lab is started (there is no extension). Lab reports received after the due date will not be allocated a mark.
• The last lab report has to be submitted in week 12: 25 May 2010 by 4 pm. Lab reports received after the due date will not be allocated a mark.
• Assignment (research question) submitted after 4.00 pm on the due date, a penalty of 50% of the maximum marks available for that assignment will be incurred. A further 25% of the maximum possible allocated marks (i.e., a total of 75%) will be deducted from assignments which are two days late. Assignment received two or more days after the due
date **will not be allocated a mark**, however, the assignment **must** still be submitted to pass the unit.

### Academic dishonesty and plagiarism

**WHAT IS PLAGIARISM?**

Plagiarism is the presentation of the thoughts or work of another as one's own (1). Examples include:

- direct duplication of the thoughts or work of another, including by copying material, ideas or concepts from a book, article, report or other written document (whether published or unpublished), composition, artwork, design, drawing, circuitry, computer program or software, web site, Internet, other electronic resource, or another person's assignment without appropriate acknowledgement;
- paraphrasing another person's work with very minor changes keeping the meaning, form and/or progression of ideas of the original;
- piecing together sections of the work of others into a new whole;
- presenting an assessment item as independent work when it has been produced in whole or part in collusion with other people, for example, another student or a tutor; and
- claiming credit for a proportion a work contributed to a group assessment item that is greater than that actually contributed (2).

For the purposes of this policy, submitting an assessment item that has already been submitted for academic credit elsewhere may be considered plagiarism. Knowingly permitting your work to be copied by another student may also be considered to be plagiarism. Note that an assessment item produced in oral, not written, form, or involving live presentation, may similarly contain plagiarised material. The inclusion of the thoughts or work of another with attribution appropriate to the academic discipline does not amount to plagiarism.

**UNSW POLICY ON PLAGIARISM**

At UNSW plagiarism is considered to be a form of academic misconduct and is viewed very seriously. UNSW is committed to helping students understand the conventions which govern academic communication to assist them avoid action which may result in academic misconduct (further information on the Student Misconduct Rules is available at: [https://my.unsw.edu.au/student/academiclife/assessment/StudentMisconductRules.html](https://my.unsw.edu.au/student/academiclife/assessment/StudentMisconductRules.html)).

In the interests of maintaining high standards in scholarship and research, the University reminds students that when they are writing essays, theses, and assessment items of any nature, they are ethically bound to refrain from plagiarism in all its forms. Students are advised to inform themselves about University policies and practices concerning assessment and Academic Misconduct (including plagiarism). Wherever possible, students should also take up those opportunities provided to them by the University to improve their academic and/or information literacy.

(1) Based on that proposed to the University of Newcastle by the St James Ethics Centre. Used with kind permission from the University of Newcastle.

(2) Adapted with kind permission from the University of Melbourne.
Special Consideration for Illness or Misadventure affecting Assessments

Students applying for Special Consideration (SC) for an illness or misadventure that may have affected their ability to prepare or complete an assessment are required to follow the procedures outlined by the University in MyUNSW and available at the following site: https://my.unsw.edu.au/student/atoz/SpecialConsideration.html

Students should particularly note the additional requirements beyond a standard medical certificate to include an assessment of the severity of your illness or misadventure and opinion of the likely effect on your capacity to undertake the assessment task/s concerned. The timeline for submission i.e. within 3 days of the assessment is also critical.

A summary of each request for SC should also be forwarded to the Faculty Office. Students requesting SC should consider seeing the Faculty Student Affairs Coordinator (SAC). Any information provided by the student to the SAC is confidential and will not be disclosed without consent.

PLEASE NOTE: This process does not prevent or discourage a student from attending their own doctor, University Health Service, the Counselling Service or the Assistant Registrar in the Student Information and Systems Office.

Assessment criteria for the lab reports
Lab reports will be assessed based on satisfactory and non satisfactory. If you obtained satisfactory for all lab reports then you will get a full mark of 25%. However, if you get non-satisfactory for one or more of the lab reports then you will get zero mark for that particular lab report. In a case of a non-satisfactory result you cannot resubmit the lab report. A sample of a lab report is available for you to look at (see the course coordinator).
