4. Course details

Credit Points: 6

Summary of the Course

This course will introduce embryological development as a major topic within medical sciences. Students completing this course will have a broad understanding of: human development, some animal models of development and current related research topics. Experts and researchers from within the field contribute to the current course.

Aims of the Course

1. This course will enable students to explore and gain further understanding of embryology through the investigation of development in both humans and animal models with a direct emphasis of their application to emerging research and reproductive technologies.
2. This course will enable students to broadly understand abnormalities in development and current applications to medical research.

Student learning outcomes

At the conclusion of this course the student will be able to:
1. Describe the key events in early and systematic embryological development.
2. Apply developmental theory to abnormalities of development and current medical research techniques.
3. Complete tasks in scientific communication either online, written and by oral presentation.
4. Work in small research groups and carry out peer assessment by completing an online group project.
Graduate Attributes

The students will be encouraged to develop the following Graduate Attributes by undertaking the selected activities and knowledge content. These attributes will be assessed within the prescribed assessment tasks.

At the conclusion of this course the student will be able to:

1. Investigate embryological development by scholarly enquiry of research literature.
2. Apply developmental theory to anatomical development.
3. Undertake basic research by applying analytical and critical thinking.
4. Create online individual and group projects that demonstrate initiative and collaborative work.

5. Rationale for the inclusion of content and teaching approach

This course includes content to enable students to develop communications skills and practices that will enhance their development as a medical researcher. It reflects my position that students should be able to use the latest tools in information technology and online practices.

6. Teaching strategies

Each week 2 lectures will introduce topics of early embryological development and later focus upon systematic development. Laboratories are designed to complement the course lecture material, allow individual and small group work and also include topics related to specific researchers within the school. Laboratories also include time for tutorials in online group project work and for to discuss and co-ordinate the group project.

7. Assessment

There are three main forms of assessment tasks shown below.

<table>
<thead>
<tr>
<th>Assessment task</th>
<th>Length</th>
<th>Weight</th>
<th>Learning outcomes assessed</th>
<th>Graduate attributes assessed</th>
<th>Due date</th>
</tr>
</thead>
<tbody>
<tr>
<td>Individual Tasks</td>
<td>Throughout the semester</td>
<td>20 %</td>
<td>Critical thinking and initiative, information literacy</td>
<td>Scholarly enquiry of research literature</td>
<td>Throughout the semester</td>
</tr>
<tr>
<td>Group Project</td>
<td>One online project page</td>
<td>20 %</td>
<td>Information literacy and effective communication</td>
<td>Initiative and collaborative work</td>
<td>Week 8 peer assessment, Week 10 final assessment</td>
</tr>
<tr>
<td>Theory Examination</td>
<td>2 hours</td>
<td>60 %</td>
<td>Engagement with the relevant disciplinary knowledge in its interdisciplinary context</td>
<td>Apply developmental theory to anatomical development</td>
<td>Within the S2 exam period 29 Oct to 16 Nov</td>
</tr>
</tbody>
</table>

More detailed assessment information can be found online:

Submission of Assessment Tasks

All student individual and group assessment tasks will be submitted online, except for some specialized tasks submitted by guest lecturers. Submission dates will be given when the task is initially set and late submissions penalized by 5% / day late.

8. Academic honesty and plagiarism

Plagiarism is using the words or ideas of others and presenting them as your own. Plagiarism is a type of intellectual theft. It can take many forms, from deliberate cheating to accidentally copying from a source without acknowledgement. The University has adopted an educative approach to plagiarism and has developed a range of resources to support students.

For more information see: http://www.lc.unsw.edu.au/plagiarism

9. Course schedule

The provisional 2011 timetable is shown below and is subject to change without notice some content may also be replaced by specialist invited guest lecturers.

<table>
<thead>

10. Expected Resources for students

Textbooks - Either of the textbooks listed below are recommended for this course and page references to both are given in each lecture. There are additional embryology textbooks that can also be used, consult course organizer. Both textbooks are currently accessible online through the UNSW Library connection.

  http://searchfirst.library.unsw.edu.au/primo_library/libweb/action/search.do?vid=UNSW&fn=search&vl{freeText0}=UNSW_SFX14190000000048007
  http://searchfirst.library.unsw.edu.au/primo_library/libweb/action/search.do?vid=UNSW&fn=search&vl{freeText0}=UNSW_SFX14190000000047996

Online materials - The course is supported by an online education site UNSW Embryology [http://php.med.unsw.edu.au/embryology](http://php.med.unsw.edu.au/embryology). Each student will be provided access to an online page for their individual assessments and the group project. Blackboard is not currently used for this course.

Additional online resources –

- School of Medical Sciences (SOMS) [http://medicalsciences.med.unsw.edu.au](http://medicalsciences.med.unsw.edu.au)
- UNSW Library website [http://info.library.unsw.edu.au/web/services/services.html](http://info.library.unsw.edu.au/web/services/services.html)
- Original Embryology website [http://embryology.med.unsw.edu.au](http://embryology.med.unsw.edu.au)

11. Course evaluation and development

Periodically student evaluative feedback on the course is gathered, using among other means, UNSW Course and Teaching Evaluation and Improvement (CATEI) Process. Student feedback is taken seriously, and continual course improvements are based in part on such feedback. For example, previous student feedback on lecture slides availability and online materials navigation has led to changes in both lecture presentations and development of a new online resource with better navigation and access.

12. Other information to be included

- Students are expected to attend all lectures and laboratories and absences require prior arrangement with the course coordinator and/or a medical certificate. See also the UNSW Student conduct policy [https://my.unsw.edu.au/student/academiclife/assessment/StudentConductPolicy.html](https://my.unsw.edu.au/student/academiclife/assessment/StudentConductPolicy.html)
- Theory examination will be a two-hour exam in the semester 2 examination period.
- Students should refer to the UNSW website for further advice concerning special consideration in the event of illness or misadventure [https://my.unsw.edu.au/student/atoz/SpecialConsideration.html](https://my.unsw.edu.au/student/atoz/SpecialConsideration.html)
- Student equity and diversity issues via Student Equity Officers (Disability) in the Student Equity and Diversity Unit (9385 4734). Further information for students with disabilities is available at [http://www.studentequity.unsw.edu.au/content/Services/Disabilityservices.cfm](http://www.studentequity.unsw.edu.au/content/Services/Disabilityservices.cfm)
