## Course details

---

**Credit Points:** 6 UOC

### Course Prerequisites / Assumed Knowledge

- PHSL2501 – Human Physiology A
- HESC2501 – Exercise Physiology
- PHSL2502 - Human Physiology B
- PATH2202 – Processes in Disease Health and Exercise Science  
or PATH2201 – Processes in Disease

### Course Description

This course will provide you information about the epidemiology and the pathophysiology of respiratory, metabolic, cardiovascular and immune diseases. You will gain knowledge of how to set up and implement exercise testing and programming in these special populations in order to provide symptomatic relief, as well as to manage the underlying disease. You will also learn how to manage the interaction between exercise and medications in these special populations. By the end of the semester you will be able to successfully use exercise testing and programming in individuals with these diseases to improve their health and quality of life. The teaching and learning approaches used in this course will include problem-based learning as well as more traditional evidence-based information provided during the lectures.

### Aims of the Course

1. To provide knowledge on the epidemiology and the pathophysiology of respiratory, metabolic, cardiovascular and immune disorders
2. Develop an understanding of the specificity of those populations based on their symptoms and treatments and their exercise limitations
3. Develop practical skills necessary for the assessment of the exercise capacity and the prescription of exercise in those populations
4. Develop competencies in exercise testing interpretation

## Student Learning Outcomes

---

This term is used to describe what it is that you should be able to do, explain or understand if you have learned effectively in the course. For each lecture, tutorial, practical and assessment item, the expected learning outcomes will be explicitly stated. The assessment in the course will be matched as closely as possible to the stated learning outcomes. That is, the assessment will test how well you have achieved the learning outcomes of the course. The general learning outcomes for the course are as follows:

### At the end of the course you should:

1. Have an understanding of the physiological mechanisms responsible for the development of the chronic conditions addressed in this course
2. Have a strong knowledge of the exercise limitations and contraindications associated with those conditions as well as the main strategies used to prescribe exercise in these populations
3. Have acquired the clinical skills required to monitor the cardio-respiratory functions at rest, during exercise and recovery
4. Develop competencies in using the information collected during the pre screening procedure and the exercise test to individualise exercise prescription

### Graduate Attributes

- Understand the relationship between physical activity and health
- Deliver lifestyle change programs that use exercise for the primary prevention of disease and the management of chronic disease
- Apply clinical skills and knowledge relevant to cardiopulmonary, metabolic, musculoskeletal and neuromuscular rehabilitation
- Engage in independent and reflective learning for the betterment of professional clinical practice, following an evidence-based approach
- Communicate effectively with patients, colleagues and other health professionals

## Rationale for the inclusion of content and teaching approach

---

**How the course relates to the Exercise Physiology profession** – This course provides a strong background on the Pathophysiology, the exercise limitations and the strategies to optimize exercise testing and prescription for major chronic conditions. It also develops critical skills necessary for the safe monitoring of cardio-respiratory function at rest, during exercise and recovery.

**How the course relates to other courses in the Exercise Physiology program** – This course builds on the knowledge and skills introduced in earlier courses in the program, in particular Human Physiology A and B (PHSL2501/2502), Process in Disease (PATH2202) and Exercise Physiology (HESC2501), to further develop critical skills and knowledge to enable students to interact with patients with chronic conditions. These skills and knowledge will be applied throughout the 4<sup>th</sup> year clinical practicum. Learning about medications and the impact on exercise responses will be extended in Pharmacology for Health and Exercise Science (PHAR2211).

## Teaching strategies

---

**Lectures** – The lectures will provide you information on the epidemiology and the pathophysiology of respiratory, metabolic, cardiovascular and immune diseases. This information will be further used to implement exercise testing and prescription in those populations by taking into account the specificity of each populations and the interaction with the medications used.

Lecture notes will be available in PDF format on **Moodle**.

**Tutorials** – During the tutorials, a problem based learning strategy will be used to discuss testing exercise capacity in specific populations. Those tutorials will also help you to learn how to use scientific literature to improve exercise testing and prescription in those populations and how to analyse data collected during exercise tests.

**Practicals** – During the practicals you will learn clinical skills concerning exercise testing in clinical conditions that will consist of:

- lung function assessment (spirometry)
- cardiac activity monitoring (electrocardiography)
- exploring the metabolic and respiratory adaptations (gas analysis)

**Assessments** – These tasks have been chosen as tools to enhance and guide your learning as well as a way of measuring performance and are therefore central teaching strategy in this course.

## Assessment

---

| Summary of Assessments                         | Weight | Due Date           |
|--|--------|--------------------|
| ASSESSMENT TASK 1 – QUIZZES                    | 4%     | Weeks 2, 5, 9, 12  |
| ASSESSMENT TASK 2 – MID SEMESTER EXAM          | 20%    | Week 5             |
| ASSESSMENT TASK 3 – CLINICAL SKILLS ASSESSMENT | 6%     | Weeks 9-12         |
| ASSESSMENT TASK 4 – REPORT ON EXERCISE TESTING | 30%    | Week 13            |
| ASSESSMENT TASK 5 – FINAL EXAM                 | 40%    | Examination period |

### Submission of Assessment Tasks

Written assessment tasks must be handed in via Turn-it-in which can be found on the TELT Moodle website. Penalties apply for late submissions.

**Penalties for late submission of assignments** – In cases where an extension has NOT been granted, the following penalties will apply:

1. For assignments submitted after **4.00pm** on the due date, a penalty of 50% of the maximum marks available for that assignment will be incurred.
2. Assignments received two (2) or more days after the due date **will not be allocated a mark**, however, these assignments **must** still be submitted to pass the unit.

### Assessment Task 1 – ONLINE QUIZZES

Online quizzes offered at the end of each block of lectures on the 4 main topics (respiratory disorders, metabolic disorders, cardiovascular disorders and immune disorders) to test your knowledge on the information delivered on these topics (weeks 2, 4, 9, 12). Answers will need to be submitted through Blackboard.

### Assessment Task 2 – MID SEMESTER EXAM

This exam will test your knowledge on the diseases pathophysiology, the effects of exercise on the pathologies or symptoms and the potential interactions with medications in respiratory or metabolic disorders.

### Assessment Task 3 – CLINICAL SKILLS ASSESSMENT

This assessment will evaluate your skills in performing critical clinical tasks during an exercise test. You will get the opportunity to perform practice runs before being assessed during labs 2 and 3. The skills you will be assessed on will be randomly assigned.

## Pre-screening procedure / protocol design

### Descriptors of Competencies assessed

---

1. **Medical Interviewing Skills:** Facilitates patient's telling of story; effectively uses questions/directions to obtain accurate, adequate information needed; responds appropriately to affect, non-verbal cues. Identifies and explores the patient's issues and concerns within the scope of a focused consultation.
2. **Protocol design:** Effectively develop individualized protocol based on anthropometric data and medical history previously collected from the patient. Appropriately assess risk levels and limitations or contraindications to exercise.
3. **Description / Explanation of the procedures to the patient:** Selectively orders/describes the different steps involved in the exercise test. Communicate effectively with patient. Appropriately describe ways of communicating during the test.
4. **Monitoring of the patient:** Communicate effectively with patient during the test. Appropriately collect information to monitor patient's response to the exercise test.
5. **Overall Clinical Competence:** Demonstrates judgment, synthesis, caring, effectiveness and efficiency. Note that this is not an average of the other domains. It is a global assessment that takes into account that in different settings the competencies take on different weightings.

COMMENTS ON STUDENT'S PERFORMANCE:

# Clinical Skills Assessment Form – HESC3541

## Electrocardiography

### Descriptors of Competencies assessed

---

1. **Description / Explanation of the procedures to the patient:** Selectively orders/describes the different steps involved. Communicate effectively with patient.
2. **Correct positioning of the electrodes:** Effectively describe correct anatomical positioning of the electrodes and appropriately place them on the patient.
3. **Determination of the heart vector:** Use relevant data to effectively determine the heart vector. Clinically interpret its significance.
4. **Monitoring of cardiac activity during the test:** Effectively monitor cardiac activity. Can describe major cardiac abnormalities.
5. **Overall Clinical Competence:** Demonstrates judgment, synthesis, caring, effectiveness and efficiency. Note that this is not an average of the other domains. It is a global assessment that takes into account that in different settings the competencies take on different weightings.

### 1. DESCRIPTION / EXPLANATION OF THE PROCEDURES TO THE PATIENT ( \_\_ Not Observed)

|                |   |   |  |              |   |   |  |          |   |   |
|----------------|---|---|--|--------------|---|---|--|----------|---|---|
| 1              | 2 | 3 |  | 4            | 5 | 6 |  | 7        | 8 | 9 |
| Unsatisfactory |   |   |  | Satisfactory |   |   |  | Superior |   |   |

### 2. ASSESSMENT OF RESTING VALUES ( \_\_ Not Observed)

|                |   |   |  |              |   |   |  |          |   |   |
|----------------|---|---|--|--------------|---|---|--|----------|---|---|
| 1              | 2 | 3 |  | 4            | 5 | 6 |  | 7        | 8 | 9 |
| Unsatisfactory |   |   |  | Satisfactory |   |   |  | Superior |   |   |

### 3. MONITORING OF RESPIRATORY RESPONSE DURING THE TEST ( \_\_ Not Observed)

|                |   |   |  |              |   |   |  |          |   |   |
|----------------|---|---|--|--------------|---|---|--|----------|---|---|
| 1              | 2 | 3 |  | 4            | 5 | 6 |  | 7        | 8 | 9 |
| Unsatisfactory |   |   |  | Satisfactory |   |   |  | Superior |   |   |

### 4. INTERPRETATION OF THE PERFORMANCE ( \_\_ Not Observed)

|                |   |   |  |              |   |   |  |          |   |   |
|----------------|---|---|--|--------------|---|---|--|----------|---|---|
| 1              | 2 | 3 |  | 4            | 5 | 6 |  | 7        | 8 | 9 |
| Unsatisfactory |   |   |  | Satisfactory |   |   |  | Superior |   |   |

### 5. OVERALL CLINICAL COMPETENCE

|                |   |   |  |              |   |   |  |          |   |   |
|----------------|---|---|--|--------------|---|---|--|----------|---|---|
| 1              | 2 | 3 |  | 4            | 5 | 6 |  | 7        | 8 | 9 |
| Unsatisfactory |   |   |  | Satisfactory |   |   |  | Superior |   |   |

---

## Clinical Skills Assessment Form – HESC3541

### Gas analysis

#### Descriptors of Competencies assessed

---

1. **Description / Explanation of the procedures to the patient:** Selectively orders/describes the different steps involved. Communicate effectively with patient.
2. **Assessment of resting values:** Adequately assess resting state of the patient based on respiratory values. Effectively determine the validity of the data collected.
3. **Monitoring of respiratory response during the test:** Effectively monitor respiratory response during the test. Can determine occurrence of ventilatory threshold
4. **Interpretation of the results:** Can appropriately determine that criteria for stopping the test have been reached. Effectively interpret the overall response of the patient.
5. **Overall Clinical Competence:** Demonstrates judgment, synthesis, caring, effectiveness and efficiency. Note that this is not an average of the other domains. It is a global assessment that takes into account that in different settings the competencies take on different weightings.

## Assessment Task 4 – REPORT ON EXERCISE TESTING

To be able to prepare this document you will need to submit your group of two students to the course coordinator by Thursday 4pm in week 4 (24/03/15). Failure to provide timely information concerning your group will result in a penalty of 25% on your mark for this assignment.

The data used to complete that document will be generated during labs 3 and 4. During those labs your performance in conducting the exercise testing will be assessed against set criteria described on page 15.

The report should be a 4 pages A4 PDF document and should be divided into 4 sections.

- Anthropometry:**
- description of the pre-testing procedures: risk assessment, regular physical activity evaluation, spirometry, ECG/BP...
  - presentation of the anthropometric measurements and tested resting values
- Aerobic capacity:**
- description of the protocol: workload increments, parameters measured (methods of determination), precautions in the population
  - analysis of the results, determination of the maximality of the test, VO<sub>2</sub>max, ventilatory threshold, double product break point. One graph per variable should be presented (VO<sub>2</sub>max, VO<sub>2</sub>VT, DBBP).
- Metabolic test:**
- description of the protocol: workload increments, parameters measured (methods of determination), precautions in the population
  - analysis of the results, determination of Cross over point and Lipoxmax (1 graph per variable) as well as total energy expenditure during the test.
- Prescription of physical activity:**
- development of a program to support lipid oxidation using the data generated during the testing
  - description of the program and of one representative session

### Marking Criteria for the Report on Exercise Testing

- Anthropometry (22 marks):
- Anthropometry
  - Medical history / Lifestyle / Classification
  - Description of the pre-testing procedure and parameters measurement
- Aerobic capacity (22 marks):
- Description of the testing procedures
  - Method for determination of the different parameters
  - Analysis of the data collected and determination of specific parameters to determine physical capacity (VO<sub>2</sub>max, ventilatory threshold, double product break point)
  - Inclusion of pertinent graphs to support parameters determination
- Metabolic test (22 marks):
- Description of the testing procedures
  - Method for determination of the different parameters
  - Analysis of the data collected and determination of specific parameters to determine physical capacity (Cross Over Point, Lipoxmax)
  - Inclusion of pertinent graphs to support parameters determination
- Prescription (22 marks):
- Description of the structure of the program including: intensity, duration (sessions and program), frequency, modality
  - Description of one representative session
  - Individualisation of the intensity during the results from the testing
  - Provision of adequate methods to monitor the intensity during the session
- Document (12 marks):
- Clear, concise and informative, creative, engaging and useful
  - Adapted to AEP audience, individualised testing procedure
  - Use of references that are fully quoted as footnotes
  - APA website for guidelines for referencing: <http://www.apastyle.org/>

## Assessment Task 5 – FINAL EXAM

This exam will test your knowledge about the diseases pathophysiology, the effects of exercise of the pathologies or symptoms and the potential interactions with medications. It will also test your practical skills for testing patients, analysing the data obtained using the test, prescribing exercise using data from the tests and information from scientific literature.

**Textbook 2:** Hampton R.J. (2008). The ECG made easy. Churchill Livingstone Elsevier. 7<sup>th</sup> Ed.

**Textbook 3:** LeMura L.M. and von Duvillard S.P. (2004). Clinical Exercise Physiology: Application and Physiological Principles. Lippincott Williams and Wilkins. (Purchase at the bookshop, Also in special reserve)

**Textbook 4:** Ehrman J.K., Gordon P.M., Visich P.S. and Keteyian S.J. (2003). Clinical Exercise Physiology. Human Kinetics. (Purchase at the bookshop, Also in special reserve)

**Textbook 5:** American College of Sports Medicine (2006). ACSM's Guidelines for Exercise Testing and Prescription. Lippincott Williams and Wilkins. 7<sup>th</sup> Ed

## Course evaluation and development

---

Every year, feedback from the student is collected through the Course and Teaching Evaluation and Improvement (CATEI) organised online by UNSW. This evaluation and feedback are used to constantly improve the course content and make it more relevant to the students. Significant changes are then communicated to the following cohort of students.

This year additional material has been developed to better guide the learning experience during the labs and allow more focus on the clinical skills that needs to be developed during these classes.

## Examination procedures and attendance requirements

---

Attendance is expected at all lectures, practicals and tutorials for this course. Attendance at all practicals, tutorials and clinicals will be recorded. Students who do not participate in these sessions for any reason other than medical or misadventure, will be marked absent and will be awarded a grade of FAIL for the entire course. If absent for medical reasons, a medical certificate must be lodged with the lecturer within 7 days of the time period of the certificate's expiry. No consideration will be given after this time. Although lectures will be available on EchoServer, student participation is encouraged in both the lectures and the tutorials and these are important to attend.

### Deferred Exams

If you miss an exam for medical reasons you must supply adequate documentation (including a medical certificate). Your request for consideration will then be assessed and a deferred exam may be granted. You cannot assume you will be granted supplementary assessment. The deferred exam may include a significant oral element. ***It is intended that supplementary exams for School of Medical Sciences courses in Semester 1 2015 will be held on the 11<sup>th</sup>, 12<sup>th</sup> and 13<sup>th</sup> of July, 2016.***
